

ALLETT

C34

Award Winning Cylinder Mowers

The C range from Allett provides a wide range of professional grass maintenance requirements on one 34" machine

**Low
Vibration**

Each "easy-change" cartridge becomes an integral part of the machine with no compromise on its ability to perform the required function. Whether it be mowing, scarification, verti-cutting or sweeping, such versatility allows much greater seasonal use of the power unit increasing the value of the investment.

This superb lightweight sports ground mower is not only perfect for soccer pitches where compaction is a problem, but also for large areas of formal lawns, where the collection of grass and a beautiful striped effect are required. An optional trailing seat can be used to increase efficiency on larger areas. In common with all other Allett mowers, height and cutter adjustments are very easy on the C34.

Designed to run on low engine revs., the machine is very smooth, quiet and economical to operate.

The rear roller is in three sections and is rubber covered for good traction and silent running over hard surfaces. Internally, the rear roller is fitted with hardened steel differential gears, which run in a sealed oil bath. The optional trailing seat also has a rubber covered roller.

The mower has a low profile for good forward visibility. The C34 is very robust and both long life and easy servicing are assured.
