

TOP DRESSER

The self propelled Top Dresser is the ideal multi-purpose applicator for top dressing and compost spreading the application of organic matter on existing turf.

The Top Dresser is also commonly used dress newly seeded areas for optimal germination.

In addition, it can spread a wide range of products including natural fertilizers, granular lime and even sand.

Its versatility, ease and speed of use make the Top Dresser a valuable piece of equipment for the lawn care professional.

Features

Top dresser

The Top Dresser is a multi-purpose motorized applicator intended mostly for green space maintenance personnel.

This top dresser was designed and developed in 1995 to respond to the needs of new technologies and best practices in the horticultural services industry.

Design

At the design level, the top dresser is based on mechanical systems drawn from much larger top dressers that are used on surfaces such as sports fields and golf courses.

on mechanical systems drawn from much larger top dressers that are used on surfaces such as sports fields and golf courses.

Operation

At the bottom of the hopper, a conveyor transports the product to an agitator which breaks up the product as required.

The product is then sent to an adjustable feeding trap and falls onto the rotary disk that evenly spreads the product onto the ground.

It is the combination of these systems which allows for the spreading of both wet and dry products.

It is important to note that the moisture level of products must not exceed 65 %.

Use

The top dresser has been designed to carry out customized top dressing applications such as the restoration of existing turf or dressing newly seeded areas.

All functions such as propulsion, clutch, and calibration of the adjustable feeding trap are within easy reach for the operator.

Please note that the application width is not adjustable and is determined by the type of product being used :

With organic matter, compost, and customized mixes: from 3 to 9 feet (1 to 3 metres);

For granular products such as natural fertilizers and lime: from 3 to 12 feet (1 to 4 metres);

For sand and salt: from 3 to 6 feet (1 to 2 metres).

With a stable wheelbase and rear wheel, the top dresser is easy to control; easily making 90° and 180° turns around obstacles while trimming along sidewalks and flower beds.

With a 34 inch width (86 centimetres), the top dresser is suited for both residential and commercial use.

Reliable, economical, and easy to maintain, the top dresser is considered the best top dresser for residential and commercial use available on the market.

Its versatility and ease of use make it a highly valued piece of equipment for the lawn care professional

Specifications

Characteristics

Top dresser which is self-propelled by a 5.5 HP Honda engine, with 6:1 gear reduction or 6.5hp B&S.

Polythene hopper with 11 cu.ft. (.325 cubic meters) load capacity;

Rotary disk top dressing device;

Double-belt conveyor, solid frame, easy access to parts;

Independent and easy access for adjustments.

Top dressing properties

Capacity: 11 cu.ft. (.325 cubic meters) / minute);

Width: from 3 to 10 feet; (1 to 3.5 metres); depending on product

Thickness: from 1/8 inch to 1/4 inch. (2.5 mm to 5 mm);

Top dressing speed: Up to 7 mph (10.5 km/h).

Dimensions and weight

Width: 34 inches; (86 cm);

Height: 38 inches; (92 cm);

Length: 76 inches: (1.95 m);

Weight empty: 250 pounds: (120 kg).

OFF/WORKS : PLOT 1/A, CAMA INDL. ESTATE, SERVICE ROAD, GOREGAON (E), MUMBAI 400 063.
